OPIOIDS & OVERDOSE FACTS

WHAT ARE OPIOIDS?

Opioids include, but are not limited to, medications prescribed by doctors to treat pain. Opioids might also be taken or used to get high.

WHAT IS OVERDOSE?

An overdose happens when a person takes an amount of a drug, or a combination of drugs, that is more than their body can handle.

WHAT IS NALOXONE?

Naloxone is a medication that can temporarily reverse an opioid overdose. Anyone can carry & administer Naloxone!
